Projects:

Project : Prive Technologies (Financial & Wealth Management Domain)
Role : Software Test Engineer

Prive is a complete web based and centralised banking solution covering all the functions of a bank. It supports multi currency transactions and all types of delivery channels. There are several modules and hundreds of screens which are available in the application. As part of the upgrade, functional and regression testing has been performed to identify the issues in different screens on various browsers.

In this Project, every month set of enhancements going live into production. Involved in test planning, strategy, test execution, and complete end to end testing activities till post production support.

My role has started with functional testing of the application and later worked on Datafeed Testing, Database Testing, Manual API Testing, Automation testing

Responsibilities:

- Started working on the existing modules to perform the regression testing
- Created test cases for new modules and took part in test planning for new modules
- Responsible for performing smoke, functional and regression testing
- Analyzing user's stories and / use cases / requirements for validity and feasibility.
- Test planning, strategy, execution

- Create test cases and automation scripts
- Worked on Feed files,uploaded files into database and run the linux scripts to generate the log files and text files and to validate the count of daily transactions
- Work with team members and contribute to the goal of the project
- Bug reporting
- Run automation test cases and share the defect reports with the developers
- Worked with developers to help them in reproducing the bugs and fix those
- Provide timely solutions.
- Individual Contributor- Interacting with Product owners to understand requirement for Testing, Design, Analyze and Report in short duration – Goal Based Projects.
